PROJECT PROFILE

PROJECT: Water Tower Refurbishment
LOCATION: Portugal

THE PROBLEM

The external concrete walls of this water tower managed by SMAS Torres Vedras were in need of refurbishment due to the effects of the environment and time.

The client sought a solution that would offer long-term protection and superior resistance to the elements.

THE SOLUTION

The concrete was suitably prepared to ensure that the substrate was clean, dry and free from contamination and primed prior to the application of our water-based, flexible coating Wall-Tech FP.

Whilst Wall-Tech FP is micro-porous thus allowing the substrate to breathe, it still has outstanding waterproofing, weatherproofing and anti-carbonation properties.

The Wall-Tech FP system offers superior adhesion to external masonry surfaces and optimum levels of flexibility and durability.

The client was pleased with the results.
