PROJECT PROFILE

PROJECT: Telecom Company - Anti-Graffiti Protection
LOCATION: Gothenburg - Sweden

THE PROBLEM

Swedish telecom company, TeliaSonera had constant problems with graffiti attack on their properties throughout Gothenburg, including exchange houses.

The traditional solution to graffiti attack had been to coat the walls with a sacrificial coating that must be reapplied after the graffiti is removed. This building had a long history of graffiti attack and had never been free from graffiti for more than two days at a time.

The company decided to take a proactive approach to the problem and called in Admatech, a Thortex Authorised Distributor, for assistance.

THE SOLUTION

Adamatech are leaders in the field of permanent graffiti protection in Sweden and they presented an on-going programme of graffiti management to the client.

The wall was cleaned and then coated with Uni-Tech UV clear in low gloss. Uni-Tech UV has superb chemical resistance and so can easily be cleaned following graffiti attack, offering permanent protection to the customer. In addition Uni-Tech UV also offers superb resistance to UV attack and so has outstanding colour and gloss retention.

As a result of this application, any graffiti attack on the property is now easily cleaned off. The ease of graffiti removal and regular inspection has resolved the graffiti problem as the vandals have moved on, leaving the property completely graffiti free.
